

DoorBird – The First Smartphone Door Station With Face Recognition

Bird Home Automation GmbH, specialist for intelligent home automation components made in Berlin, will introduce more exciting products at the upcoming Consumer Electronic Show (CES) in Las Vegas in January 2016. Visit us at: Booth 81927, Sands Expo Center, Hall G / Level 1.

New: Face Recognition For Smartphone Door Station

You are in a meeting or on your couch at home and want to know who just rang the doorbell: your mother-in-law, your best friend or maybe the delivery person? Seems like DoorBird's smartphone door station is exactly the right fit for you! As soon as someone rings the doorbell you get a push-notification on your smartphone or tablet. In case the system knows the visitor you even see the name of the visitor in your push-notification.

With DoorBird you can see the visitor live and in HD, talk to him and even open the door – via smartphone. All of this is done of course in compliance with the strictest data regulations.

Additionally, we will show more exciting add-ons and functions for DoorBird's smartphone door station at the Consumer Electronics Show (CES) in January 2016, for example:

New: Smartphone Window And Door Sensor

You left the house and don't remember if you closed the door to the backyard? Just start the DoorBird App when you are on the road and check if the door is open. Did your child get home safe and sound? DoorBird's window and door sensor notifies you if someone enters the house and therefore works as a security system.

New: Cloud-Recording

You travel a lot and want to know who rang the doorbell during the day or was on your property? Just activate the cloud-recording function of the DoorBird smartphone door station and look up the videos of the last seven days via smartphone. Of course in HD!

New: DoorBird Connect

DoorBird Connect is a free function and every DoorBird smartphone door station includes it. With DoorBird Connect you fully control your smart home and IoT (Internet of Things) – even if Bird Home Automation is not the manufacturer. Connect your DoorBird smartphone door station with all your favorite devices in your home, for example August or Kevo smart locks, Liftmaster and many more.

DoorBird's smartphone door station is on the market since more than a year and already established as Europe's most selling smartphone door station! It is developed and manufactured exclusively in Germany. High quality materials and different editions like the surface and flush edition as well as stainless steel models complete the technical innovations.

DoorBird is available starting from \$349 via www.doorbird.com and selected resellers.

The Company

The smartphone door station DoorBird is a product of the Bird Home Automation LLC with offices in Berlin and San Francisco. The Doorbird is designed and manufactured with German quality engineering. The company Bird Home Automation specializes in products for private customers that keep the user's comfort as much in mind as their security
