

DOORBIRD FOR A
LANDMARKED BUILDING

OLD BUILDING CHIC AND LOFT FEELING

Haus Lademann is an eye-catcher for city romantics. Located at Wallstraße 84 on the banks of the Spree Canal, it is one of the oldest surviving Wilhelminian style buildings in Berlin-Mitte and looks back on a history of over 140 years. Today, the building belongs to Christmann Projekt-Entwicklung GmbH, which specializes in the renovation of listed old buildings. The renowned architectural firm Kahlfeld redesigned the former headquarters to create 14 residential units and the new company representative office of Christmann Projekt-Entwicklung GmbH.

REQUIREMENTS

- ✓ Good price-performance ratio
- ✓ Convenient and secure access control
- ✓ Low maintenance

TWO DOOR STATIONS FOR ONE BUILDING

Two IP video door stations made of brushed stainless steel with PVD coating in bronze look were installed in the outside entrance area. The models feature a state-of-the-art display, an ultra-wide-angle camera in HDTV video quality, a powerful echo and noise cancellation system, motion sensors and light sensors for night vision mode. With the integrated keypad module, residents and visitors can conveniently operate the door station and open the door with individual PIN codes.

INDOOR STATION AND DOORBIRD APP

In addition to the company representative office, the 14 residential units were each equipped with an IP indoor station A1101, which can be operated intuitively and conveniently. The indoor station was specially developed for door communication in multi-tenant buildings so that the video door intercom system can be conveniently controlled, and all visitors can be seen and spoken to. Even if the Internet should fail for a short time, all functions of the indoor stations and door stations remain in the local network. In addition, access to the door stations is possible flexibly via the DoorBird App, for example when the residents are out shopping or on vacation.

MANY ADVANTAGES FOR OWNERS AND TENANTS

Both, building owners and the new residents, are very satisfied with the door stations and indoor stations. The owners have been particularly impressed by the good price-performance ratio, the fast delivery, and the low maintenance requirements. The residents benefit above all from the fact that access to the building is very convenient via PIN code. The indoor station and the DoorBird app also proved to be practical and convenient in everyday life.

Highest security standards

Flexible combination of app and indoor station

Access control with individual PIN codes thanks to the keypad module

Appearance matches the listed facade
