## OVERVIEW

*"Our customer asked for the Cadillac, and we gave him the Rolls Royce."*

*Nick Post,  
Your New Gate Company*

In the scenic town of Canton, Georgia, a homeowner set out to enhance the security and curb appeal of his single-residence property with a high-end gate access solution. The project was managed and executed by Your New Gate Company, with a clear directive: deliver a system that was as elegant as it was functional.

## DOORBIRD – THE SOLUTION

The homeowner was looking for the pinnacle of gate systems - something that combined advanced technology with a refined aesthetic. DoorBird was selected for its:

- Customizable design, allowing seamless integration with the home's lighting and architectural style.
- Direct wiring capability, which initially aligned with the existing Cat5 cabling infrastructure.
- Comprehensive feature set, including video surveillance, motion detection, and real-time notifications.

## ADVANTAGES

- ✓ No app fees or monthly subscriptions – a distinct competitive advantage.
- ✓ Real-time video and motion detection for reliable gate monitoring.
- ✓ Bronze finish ensures a harmonious design with the gate and surroundings.
- ✓ Flexible technology: Direct-wired replaced by cellular due to wiring limits

The chosen model was the DoorBird D1101KH Classic with bronze-finish – a sleek, timeless look that complemented the property's exterior. This unit features a multi-functional keypad, HD video camera, two-way audio, and motion sensor, making it ideal for high-end residential applications.

## NEEDED REQUIREMENTS

The homeowner's expectations were high, and DoorBird delivered on several key fronts:

A clear advantage: no running costs. There are no app fees or monthly costs—a clear advantage over many competitors. Maximum security is ensured by the combination of real-time video transmission and intelligent motion detection, which guarantees reliable monitoring of gate activity. The elegant bronze finish blends harmoniously into the overall appearance and perfectly matches the gates and architectural accents in the outdoor area. Technologically, DoorBird is flexible and reliable – the originally planned direct cabling was successfully replaced by a modern mobile phone solution due to local conditions.

## CUSTOMIZATION OF INSTALLED DOORBIRD PRODUCT

A standout feature of this installation was the customization of the DoorBird intercom system to meet the homeowner's exacting standards. The D1101KH IP Video Intercom was not only selected for its robust functionality but also tailored to blend seamlessly with the property's upscale aesthetic. The bronze-finish was chosen to match the gates and home's exterior accents, while the black keypad provided a sleek contrast that enhanced visibility and usability.
