

SYSTEM REQUIREMENTS

- DoorBird IP Video Door Station D10x/D11x/D21x Series.
- Fibaro Home Center Lite.

ADDITIONAL INFORMATION

The following guide will take you through the steps of setting up a DoorBird IP Video Door Station in connection with Fibaro Home Center Lite.

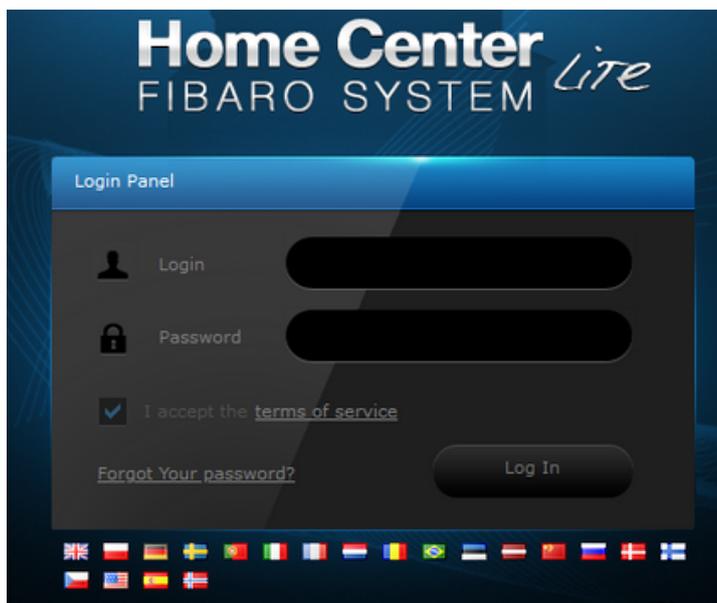

Please make sure that Fibaro Home Center Lite is connected to the same local network as your DoorBird IP Video Door Station is connected. Please also make sure that your DoorBird is online, using this service <https://www.doorbird.com/checkonline>

The local IP address of your DoorBird is available from the same page.

Note: The following guide will give an idea how you can implement automations using DoorBird device with the Fibaro Home Center Lite.

1. SETTING UP THE DOORBIRD IN THE FIBARO HOME CENTER Lite.

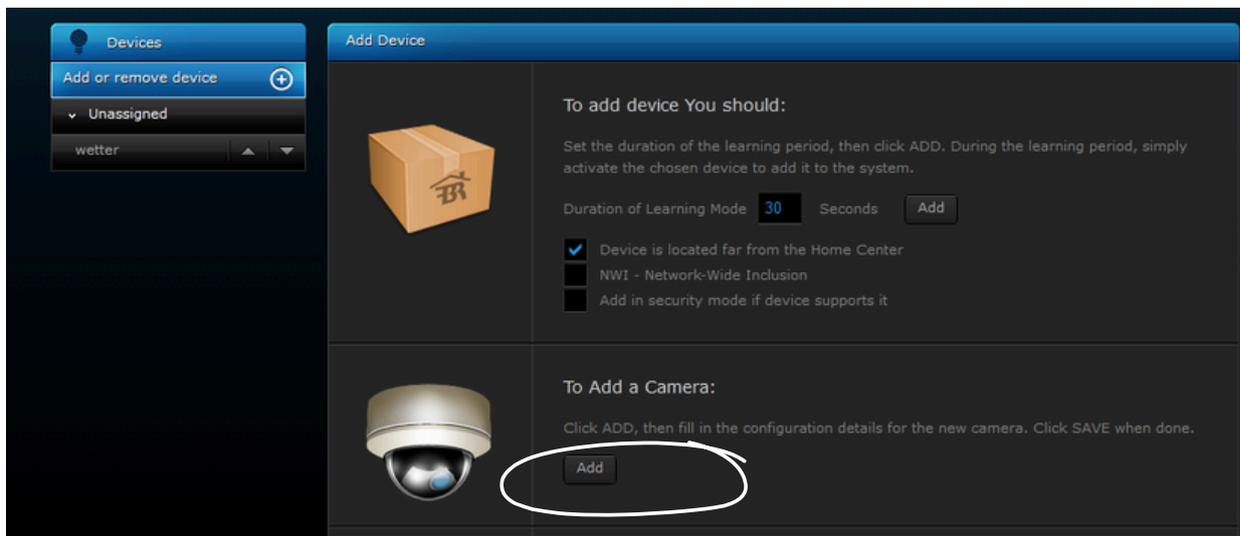

- 1.1 Connect to the web portal of your Fibaro Home Center Lite(Enter the IP address of the device on the browser) and log in using your admin credentials.

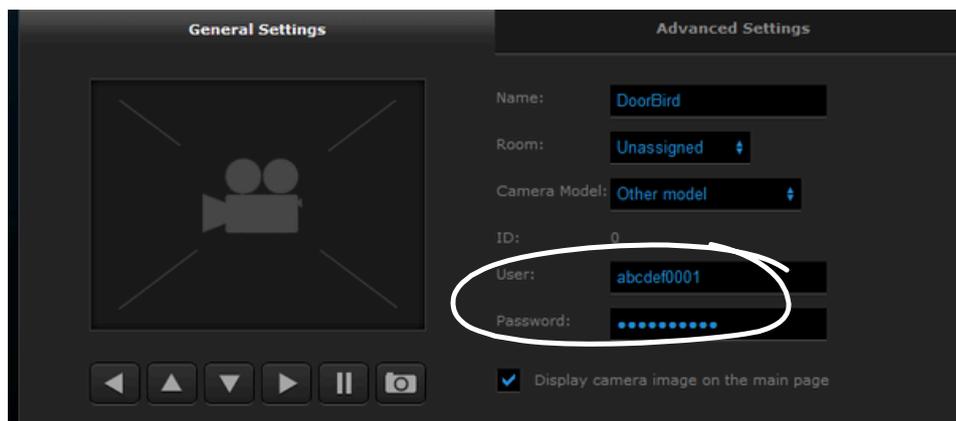

- 1.2 Go to Devices --> Click on " Add or remove device " (To add the DoorBird Device).

1.3 Click Add --> To add a Camera.

1.4 Enter a Name, Change the "User" from the "DIGITAL PASSPORT" document that was shipped with your DoorBird IP Video Door Station, e.g. "user0001". Enter the password associated with the user0001 into the "Password" field

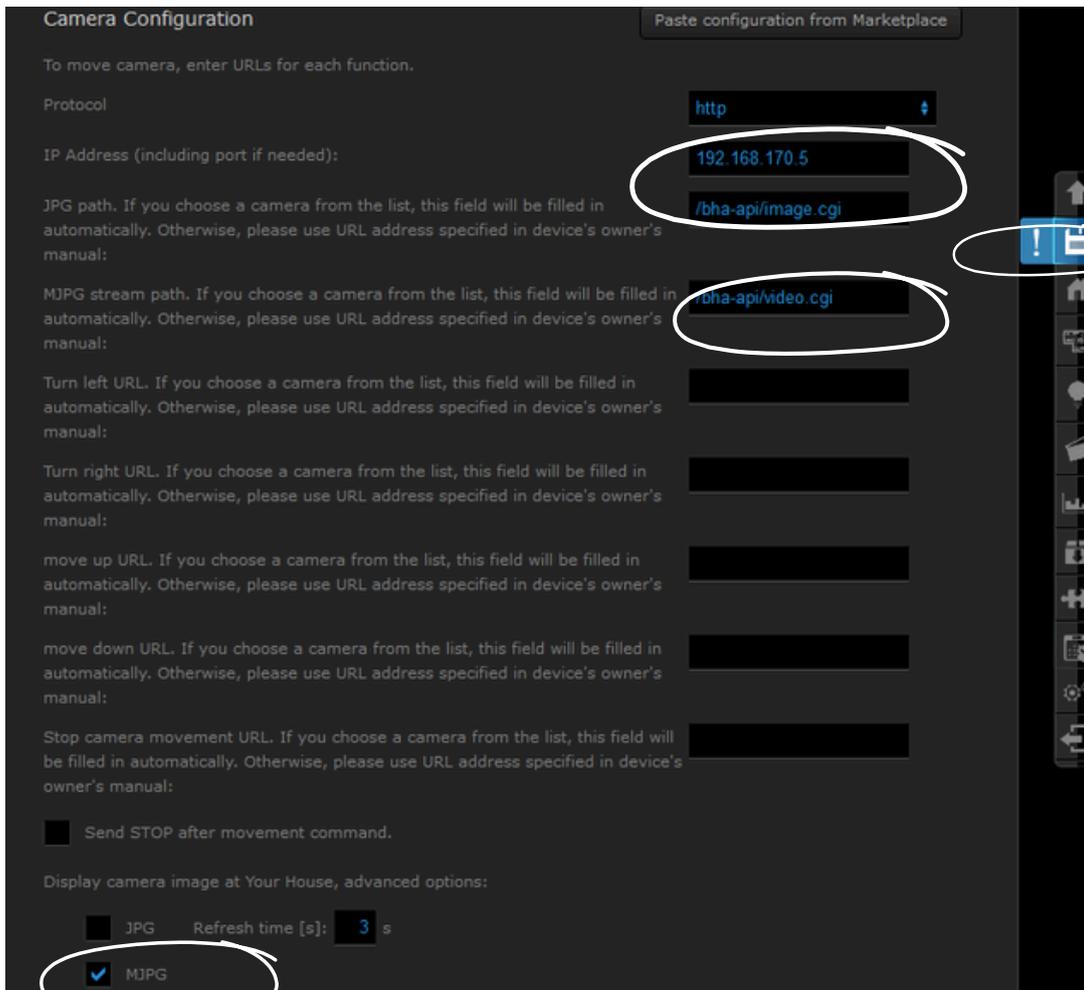

1.5 Scroll down to the “Camera Configuration” area and enter the IP address of your DoorBird IP Video Door Station into the “IP Address” field.

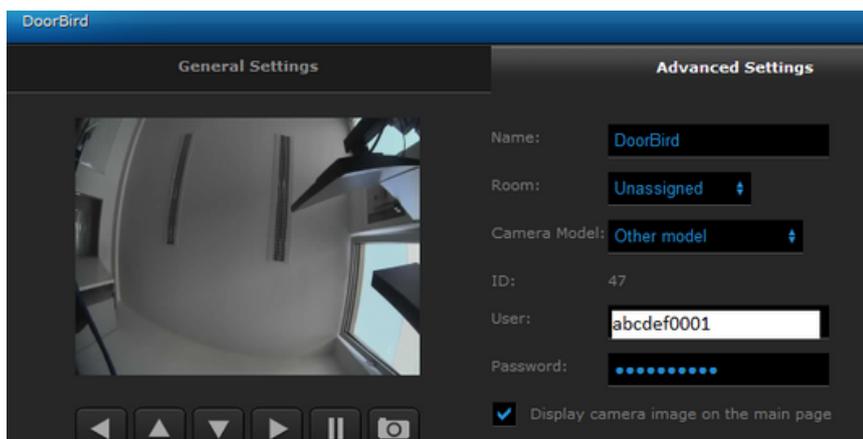

For the “JPG path” --> /bha-api/image.cgi

For the “MJPG stream path” --> /bha-api/video.cgi

Click on the disk symbol to Save the Settings.

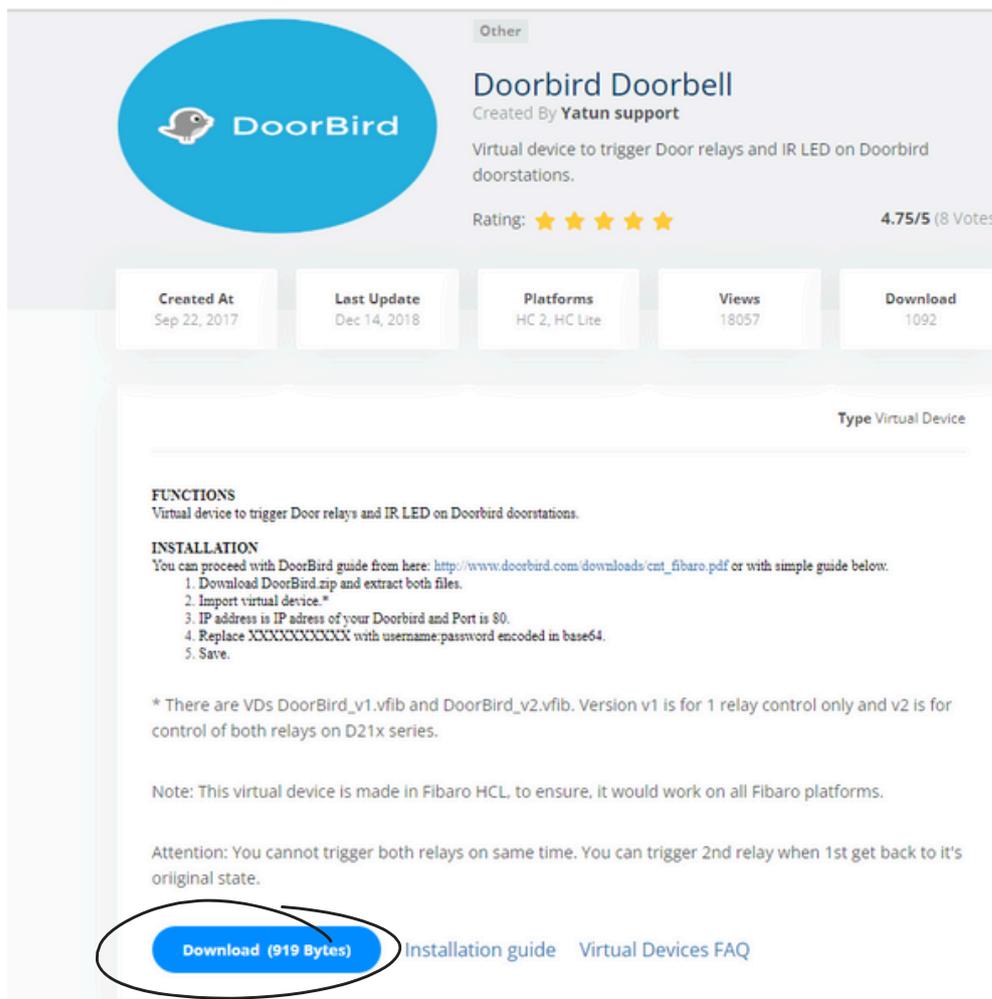

1.6 If everything has been entered correctly you should see a live image of your DoorBird IP Video Door Station listed under “Devices”.

1.7 Activating the door opener and infrared lighting requires the additional Fibaro App "DoorBird Doorbell" from the Fibaro Marketplace.

1.8 To download it, go to <https://marketplace.fibaro.com/items/doorbird>

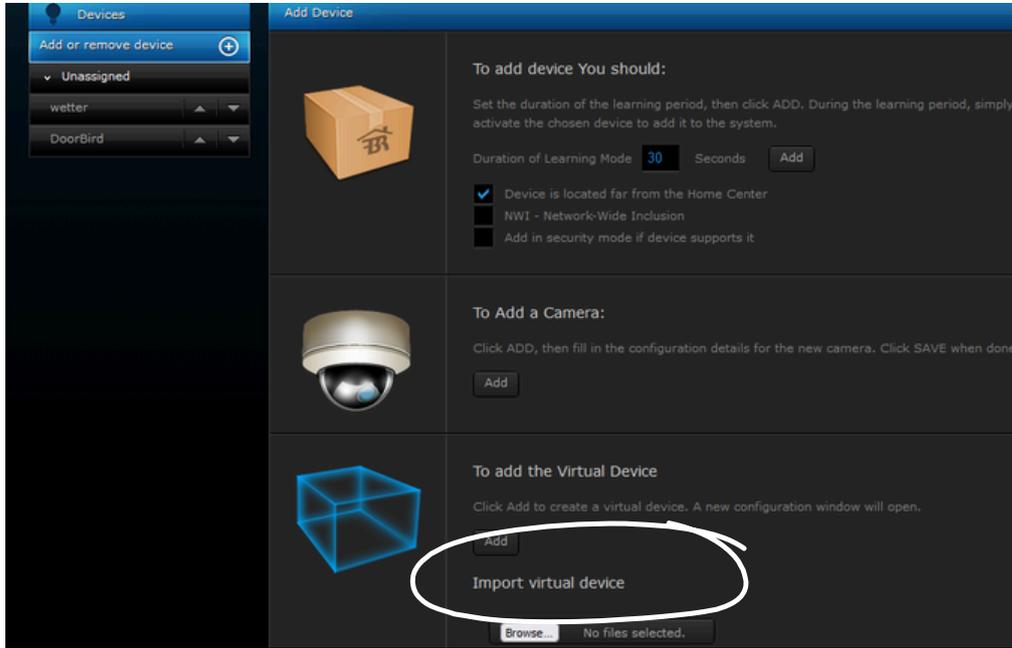

1.9 After downloading the Fibaro App "DoorBird " from the Fibaro Marketplace, log into Fibaro Home Center Live again, return to the "Devices" section and click the "Add" button to re-open the selection menu.

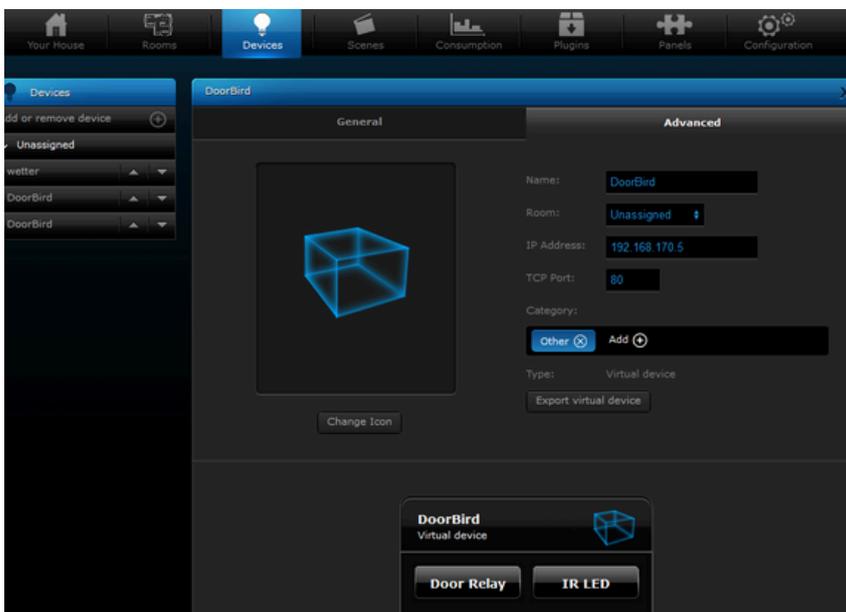

1.10 Create a new virtual device and include the previously downloaded Fibaro App “DoorBird”. Browse the file Relay or IR(DoorBird_v1.vfib).

Note: DoorBird_v2.vfib file includes two Relays for open-door with IR light

1.11 The configuration interface will automatically open after the “DoorBird” App is successfully integrated. Here, enter the IP address of your DoorBird IP Video Door Station into the “IP Address” field and set “Port” to “80”.

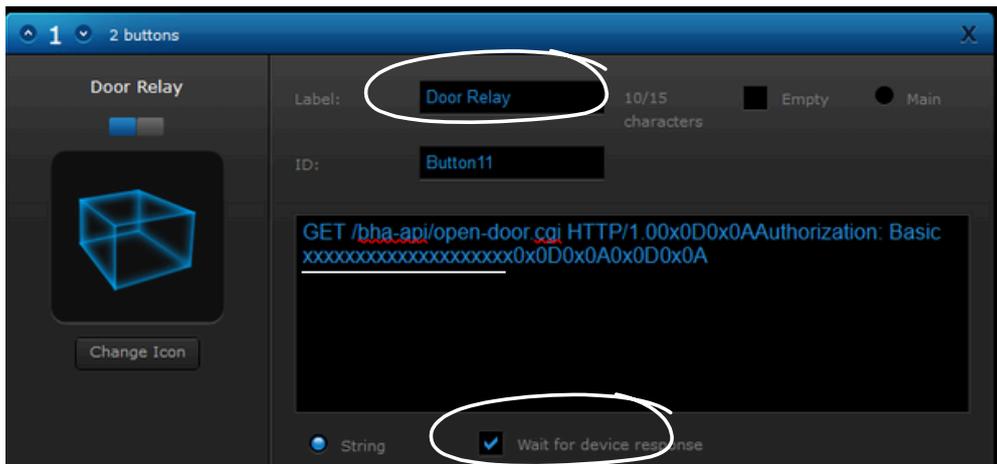

1.12 Switch to the “Advanced” Tab and scroll down to the bottom. Select one button to configure Relay button.

1.13 For the “Door Relay”, enter the following (see image below for visual reference):

`GET /bha-api/open-door.cgi HTTP/1.00x0D0x0AAuthorization: Basic`

`XXXXXXXXXXXXXXXXXXXX0x0D0x0A0x0D0x0A`

Where XXXXXXXXXXXXXXXXXXXX is a Base64 encoded representation of your DoorBird App Username (e.g. “user0001”) and password. To obtain such a Base64 representation, use a tool like <https://www.base64encode.org/> to generate one, entering your App Username and password separated by a colon, e.g. user0001:password

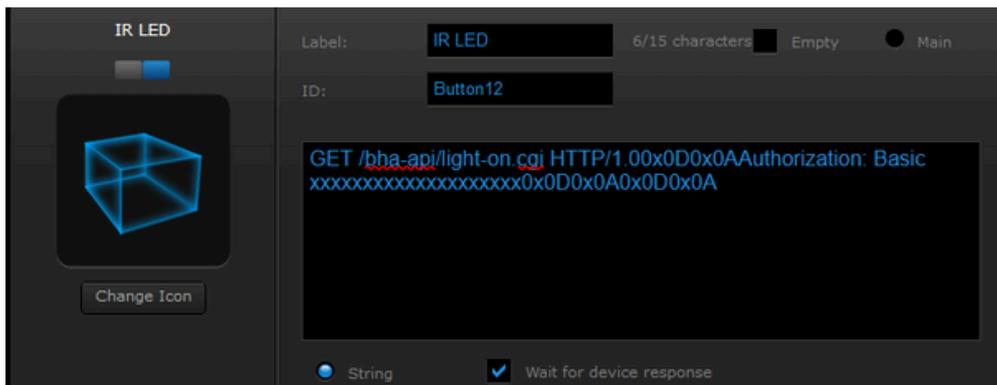

1.14 Do the same for the IR LED, replacing /bha-api/open-door.cgi with /bha-api/light-on.cgi:

`GET /bha-api/light-on.cgi HTTP/1.00x0D0x0AAuthorization: Basic XXXXXXXXXXXXXXXXXXXX`

`0x0D0x0A0x0D0x0A`

Save the Changes.

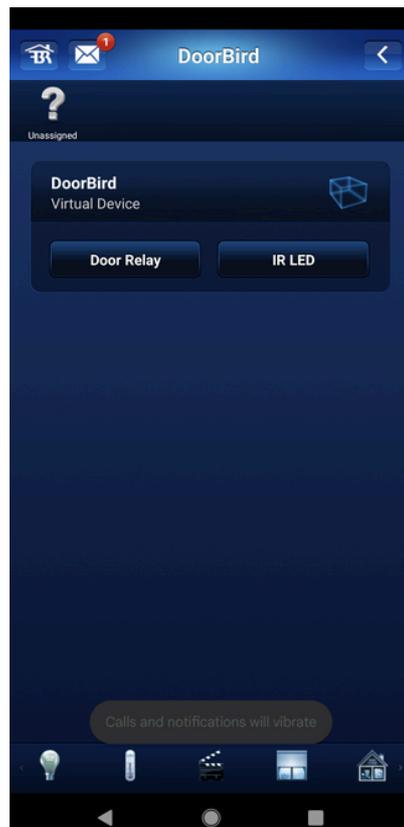

1.15 You can trigger Relay and IR light from Fibaro App

Note: HC2 & HCL Series > <https://marketplace.fibaro.com/items/doorbird>

This system works with .vfib file format

HC3 & HC3L Series > <https://marketplace.fibaro.com/items/doorbird-1c8e7325-0e1a-4f03-b26c-378ecf34c827>

This system works with the .fqa file format
