Berlin, April 5, 2023

The new firewall from DoorBird: Effective protection for your building network

The new DoorBird A1051 Internet Firewall is now available worldwide. DoorBird is the first in the industry to launch a user-friendly solution that provides additional protection for the network of door communication systems.

The easy-to-install firewall increases security for all networks where DoorBird products are used - both inside and outside. The Berlin-based manufacturer Bird Home Automation GmbH creates another unique selling point in the field of smart IP video communication with the DoorBird A1051 Internet Firewall product.

The firewall reliably stops unauthorized network traffic without the need for complicated configurations. The product is pre-configured at the factory and ready for immediate use. The installation takes place between the local Internet router and the DoorBird IP video door communication network - easily and without any prior technical knowledge. The network is protected against unauthorized access at main and side entrances, underground garage entrances, floor accesses` or other rental areas indoors. This makes the Internet firewall suitable for large office complexes, commercial buildings, apartment buildings, and single-family residences. For example, a tenant could misuse the network cable connected to an IP video indoor station to surf the Internet or gain unauthorized access to other network components in the building. Implementing firewall solutions for this purpose with well-known firewall products is expensive, complicated and most of all very time-consuming to implement on a day-to-day basis.

In order to meet individual network requirements, smart home systems from third-party providers (e.g. DoorBird Connect partners) can be whitelisted. The Internet Firewall can be configured comfortably remotely via app or browser.

About Bird Home Automation GmbH / DoorBird

The Bird Home Automation Group develops and manufactures high-quality IP video door intercoms, access control devices, indoor stations and accessories under the trademark “DoorBird”. The company’s headquarters and production plant are in Berlin, Germany, with a sales office in San Francisco (CA) and Jacksonville (FL). The products for the connected smart home are made in Germany according to the highest quality and security standards and are installed worldwide. “DoorBird” combines exclusive design with the innovative IP technology in the field of door communication.
